## FEATURES

- Input Power Voltage: $24 \mathrm{~V} \pm 1 \mathrm{~V}$
- Input Current Range: 80 mA to 380 mA
- Output Voltage: 0 to $6 \mathrm{kV} @ C T R L=0$ to 5 V
- Max. Output Current: 1mA
- Reference Voltage: 5V $\pm 0.05 \mathrm{~V}$
- Input Control Voltage: 0 to 5V
- Full Span Modulation on Output Voltage
- Electronic Shutdown Control

## APPLICATIONS

This power module, AHV24V6KV1MAW, is designed for achieving DC-DC conversion from low voltage to high voltage as a power supply source which is widely used in scientific research and other fields including:

- X-ray Machine
- Spectral Analysis
- Nondestructive Inspection
- Semiconductor Manufacturing Equipment
- CRT Monitor Test
- Particle Accelerator
- Capillary Electrophoresis
- Particles Injection
- Semiconductor Technology
- Physical Vapor Phase Deposition
- Radio Frequency Amplification
- Electrospinning Preparation of Nanofiber
- Glass / Fabric Coating
- DC Reactive Magnetron Sputtering
- Cyclotron Accelerator

| 4 | VPS | Red | 0 | Power input | Input voltage |  | 24 V |  |
| 5 | GND | Black |  | Ground for analog, digital <br> and power signals. | Ground electrode |  | 0 V |  |
| 6 | VOUT | Brown |  | Power output | Output high voltage | 0 V |  | 6 kV |

## DESCRIPTION

Figure 2 shows the connecting wires of AHV24V6KV1MAW, of which their detail information given in Table 1. The output voltage can be set to a constant value by connecting the CTRL port to the central tap of a POT (Potentiometer) or modulated by an AC signal ranging from 0 V to 5 V corresponding to 0 V to 6 kV proportionally at the output VOUT port as shown in Figure 3 and Figure 4 respectively.

Figure 3. Setting Output to be a Constant Voltage

Figure 4. Modulating Output by an AC Signal Source
Please note that the modulation signal must have a low frequency $\leq 10 \mathrm{~Hz}$ and the value range must be $0 \mathrm{~V} \leq \mathrm{V}_{\text {CTRL }} \leq 5 \mathrm{~V}$. The equivalent input circuit for the CTRL is shown in Figure 5.

Figure 5. The Equivalent Circuit for CTRL Port To shutdown AHV24V6KV1MAW, pull down SDN pin to $<0.8 \mathrm{~V}$; to turn it on, leave SDN pin unconnected or pull it $>1.2 \mathrm{~V}$. The maximum voltage allowed on the SDN pin is 5 V . The equivalent circuit for SDN port is shown in Figure 6.

Figure 6. The Equivalent Circuit for SDN Port

## USING AHV24V6KV1MAW

This high voltage power supply must be mounted tightly onto a metal plate, ideally, thus expanding its heating sinking capacity of the metal enclosure. Sufficient ventilation must be provided to keep the power supply surface temperature under $55^{\circ} \mathrm{C}$.

## SAFETY PRECAUTIONS

Although AHV24V6KV1MAW high voltage power supply comes with an over current protection circuit, a short circuit at the output should always be avoided. Make sure the high voltage wire for connecting VOUT node has sufficient insulation capability with its surrounding objects.

## SPECIFICATIONS

Note 1: PSRR $=20 \log _{10} \frac{\Delta \mathrm{~V}_{\text {vout }} / \mathrm{V}_{\text {VOUT }}}{\Delta \mathrm{V}_{\text {VPS }} / \mathrm{V}_{\text {VPS }}}$
$\Delta \mathrm{V}_{\text {Vout }}=\mathrm{V}_{\text {Vout }}\left(\mathrm{V}_{\text {VPS }}=24.5 \mathrm{~V}\right)-\mathrm{V}_{\text {Vout }}\left(\mathrm{V}_{\text {VPS }}=23.5 \mathrm{~V}\right), \mathrm{V}_{\text {Vout }}\left(\mathrm{V}_{\text {VPS }}=24.5 \mathrm{~V}\right)=\mathrm{V}_{\text {Vout }}\left(\mathrm{V}_{\text {VPS }}=24 \mathrm{~V}\right)$
$\Delta \mathrm{V}_{\text {VPS }}=24.5 \mathrm{~V}-23.5 \mathrm{~V}, \mathrm{~V}_{\text {VPS }}=24 \mathrm{~V}$
Note 2: $\operatorname{TCV}_{\text {vout }}=\frac{\left|\Delta \mathrm{V}_{\text {vout }}\right|}{\mathrm{V}_{\text {vout }} \times \Delta \mathrm{T}}$
Note 3: $\eta=\frac{V_{\text {vout }} \times \text { Ivout }}{V_{\text {vps }} \times I \text { Ivps }}$

## TESTING DATA

Test conditions: $\mathrm{V}_{\text {VPS }}=24 \mathrm{~V}, \mathrm{~T}_{\mathrm{A}}=25^{\circ} \mathrm{C}, \mathrm{R}_{\text {LOAD }}=6 \mathrm{M} \Omega$

## DC Testing

The measured output voltage, $\mathrm{V}_{\text {vout }}$, corresponding to the control port input voltage, $\mathrm{V}_{\text {CTRL, }}$ is shown in Figure 7.

Figure 7. $\mathrm{V}_{\text {CTRL }}$ vs. $\mathrm{V}_{\text {vout }}$

## AC Testing

To test the analog modulation function, a triangle and sine-wave voltage signals are applied to the CTRL port as the input source signal respectively. Figure 8 and 9 show both the input signal and the output signal waveforms when using the triangle and sine-wave signals at the CTRL port respectively.

CH1: 2000V/Div CH2: 2V/Div M: $500 \mathrm{~ms} /$ Div
$V_{\text {CTRL }}: 0.25 \mathrm{~V} \sim 5 \mathrm{~V} \quad \mathrm{~V}_{\text {VOUT }}: 300 \mathrm{~V} \sim 6000 \mathrm{~V}$
Figure 8. Input vs. Output Waveforms for Triangle Wave Control

Figure 9. Input vs. Output Waveforms for Sine Wave

To test the rise and fall times at the output, a step function signal is applied to the CTRL port. The testing results are shown in Figure 10, Figure 11, and Figure 12. As shown in Figure 11 and Figure 12, a square wave of $0.25 \mathrm{~V} \sim 5 \mathrm{~V}$, $\mathrm{f}=0.10 \mathrm{~Hz}$, is applied to CTRL port, the output waveform fall time is measured to be about 100 ms and the rise time is about 30 ms . These two values are not the same, that is because on the rising trail, the power supply injects a current to the load; while on the falling trail, the best the power supply can do is to stop its output current and let the load resistor drain the output filtering capacitor to a lower voltage, and the draining current is much smaller than the injection current.

## NOTICE

1. ATI warrants performance of its products for one year to the specifications applicable at the time of sale, except for those being damaged by excessive abuse. Products found not meeting the specifications within one year from the date of sale can be exchanged free of charge.
2. ATI reserves the right to make changes to its products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that the information being relied on is current and complete.
3. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgment, including those pertaining to warranty, patent infringement, and limitation of liability. Testing and other quality control techniques are utilized to the extent ATI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.
4. Customers are responsible for their applications using ATI products. In order to minimize risks associated with the customers' applications, adequate design and operating safeguards must be provided by the customers to minimize inherent or procedural hazards. ATI assumes no liability for applications assistance or customer product design.
5. ATI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of ATI covering or relating to any combination, machine, or process in which such products or services might be or are used. ATI's publication of information regarding any third party's products or services does not constitute ATI's approval, warranty or endorsement thereof.
6. IP (Intellectual Property) Ownership: ATI retains the ownership of full rights for special technologies and/or techniques embedded in its products, the designs for mechanics, optics, plus all modifications, improvements, and inventions made by ATI for its products and/or projects.
