### FEATURES

- Built-in High Voltage Power Supply
- Compact Size: 9.15(L)×9.05(W)×2.4(H) inch  
232.5(L)×230(W)×61(H) mm
- Bi-directional Output: ±2000V
- High Current Capability: Up to 20mA
- High Slew Rate: 2000V/μs@open load  
540V/μs@250pF load
- Input Signal Voltage Range: ±10V
- Adjustable Bias Voltage Range: -10V ~ 10V
- Combined Control Voltage Range\*: -10V ~ 10V
- Bandwidth: 15kHz @ Load = 100pF  
10kHz @ Load = 250pF  
8kHz @ Load = 500pF  
3kHz @ Load = 1nF

\*: Input Signal + Bias voltage = Combined Control Voltage

### CUSTOMIZATION

If a higher bandwidth is needed, we can customize high voltage amplifiers with larger size and larger heat sink.

### APPLICATIONS

This high voltage amplifier can be used for driving high voltage loads, including: piezoelectric transducers, mass spectrometers, electrostatic precipitators, electrophoresis experiments, high voltage storage capacitors, etc.

### WARNINGS

1. Never touch the high voltage output by hand.
2. Do not place any foreign objects on the face plate.
3. Never connect the high voltage output to the low voltage side connectors. Keep them at least 2inch (50mm) apart.
4. Before connecting or disconnecting high voltage output, make sure to turn off the amplifier power.

DESCRIPTION

The AHVAPN2000V20MABN is an electronic module for amplifying an analog input voltage into a high voltage output. Figure 1 shows its photos. It comes with a high voltage DC-DC converter, which converts the 24V input voltage into two output voltages: -2100V and +2100V. The analog input voltage, VIN(t), can be from -10V to +10V, the corresponding

output voltage, HVO(t), is from -2000V to +2000V. There are three LEDs indicating: 24V power supply is present and within an appropriate window: 23V to 25V, the high voltage power supply is outputting ±2100V outputs properly, and the control loop works properly, i.e. HVO(t) = 200×VIN(t).
